

Resource Economics - Exercise Sessions Spring Term 2026

Raul Hochuli
(raul.hochuli@unibas.ch)

University of Basel, Faculty of Business and Economics,

Spring Term

Intro

Goal for Exercise Sessions

- To better understand theoretical models, we will use software to transfer them to more "manageable tools" for a better understanding (DICE).

Structure

- Jupyter notebooks (good combination of code + writing)
- Exercises will be uploaded to ADAM 1 week in advance.
- Please send me your solutions (even if incomplete every **Sunday evening before class**. This helps me optimize teaching (**no grading**)).

Self Study & Python

- Two self-study tasks to get everybody up to speed ("Refreshing Optimization" + "Getting Started in Python"), come see me if you struggle.
- We will use Python extensively in the course. If self-study is not enough → [Crash Course: Scientific Software - Python](#) (March 5th / 12th **registration mandatory March 1st!**).

Intro

Self Study & Python

- **Crash Course: Scientific Software - Python**, (you can also try to replicate the exercises in the Github Repo and see if you still need the course)
 - Python
 - Lecturer: Léo Picard (contact: leo.picard@unibas.ch)
 - Lectures: March 5th and 12th (Thursdays), 8:15 to 10:00
 - Software: Spyder, available on Anaconda (> <https://www.anaconda.com/download>)
 - Course material: via GitHub (> https://github.com/leops95/intro_to_python)

In General

- Try to do the Problem Sets up front, not all at the end of the term.
- If you have questions / found mistakes in the code - email me rather sooner than later
